

Installing R and R-Studio

This [page](#) gives a good overview how to install R and R-Studio. If the link to download R for windows does not work you can try this [one](#).

For those who have more than one R-Version on their computer this [page](#) gives you an overview how to work with it in R-Studio.

We recommend to install the following packages:

knitr, reshape2, ggplot2, scales, RColorBrewer, gplots, plyr, rmarkdown

To install packages within in R-Studio go to Tools -> install packages. You can install several packages at the same time (comma separated).

To check if the installation is successful load them once:

```
library(knitr)
library(reshape2)
library(ggplot2)
library(scales)
library(RColorBrewer)
library(gplots)
library(plyr)
library(rmarkdown)
```

If you have any questions write us at berlin@rladies.org

We hope to see you soon at one of our [MeetUps](#)!
